

Participant Information Sheet

Solace: Healthcare Worker Burnout-Related Wellbeing Monitoring

Thank you for your interest in taking part in this study. Please read this information sheet carefully before deciding whether to take part. You may keep a copy of this sheet.

Who is running this study?

This study is run by Subathra Sundarbabu, a final-year BSc Computer Science student at the University of London, as part of a final-year project (CM3070). If you have any questions, you can contact the researcher at sundarba002@mymail.sim.edu.sg, or the project supervisor Sarita Singh at singh009@mymail.sim.edu.sg.

What is the study about?

The study evaluates Solace, an experimental desktop application which provides a wellbeing indicator based on a short check-in. A check-in is when you record or upload a short audio or video clip talking about your day. The app analyses this with artificial intelligence models and provides a wellbeing score, a trend and a supportive suggestion. This session will look at how usable and usable the tool is, and how well its score reflects how people feel.

Why have I been invited?

You are invited because you are an adult who can provide feedback about how easy it is to use the tool. It will involve five to ten people. This is an experimental student project and not a real health or wellbeing service.

Do I have to take part?

No. You may participate on a voluntary basis. You are free to decline to take part and you may also leave at any time during the session without giving any reason. If you choose not to participate or to withdraw, it will not affect you in any way.

What will I be asked to do?

If you agree to take part, you will be asked to:

- Fill in a short self-report about how you feel today.
- Create a temporary account in the app using a username of your choice.
- Complete one short check-in by recording or uploading a short audio or video clip.
- Fill in a short questionnaire about how easy the tool was to use and how clear the result was.

The whole session takes about 10 to 15 minutes.

Do I have to say anything personal in the recording?

No. There is no need to share any real personal suffering or private information. You are welcome to speak about a neutral topic. Think of this as a test run of the software rather than genuine wellbeing support.

What are the possible risks?

The risks are very small. The tool is not a medical device and does not diagnose any condition. If you are ever uncomfortable talking about your day, you may stop right away. If you ever feel you need real support, please speak to a doctor or other qualified professional.

What are the possible benefits?

No direct benefit to you. Your feedback will be used to improve the design of the tool and also to inform research on wellbeing technology.

What happens to my data and my recording?

Your privacy is safe. The original audio or video recording is used only during processing, and then deleted. It is never sent to the internet, and never leaves the local computer. Only the scores, a transcript of the text and the suggestion are stored locally on the device.

Your self-report responses and usability feedback are recorded anonymously by participant number (e.g. P01) and not by name. Your responses will not be associated with any identifying information or used in the report. The researcher will keep all data secure and will destroy it after the project has been marked.

Will my responses be confidential?

Yes. Your answers will be anonymous and confidential. You will not be identified in the project report or any output. Confidentiality shall be maintained within the limits of the law.

What if I want to withdraw?

You can leave at any time during the session and all data collected from you will be deleted. The responses are anonymous so we may not be able to identify and remove your individual responses once the session is completed and the data combined.

Who can I contact with questions?

You can contact the researcher, Subathra Sundarbabu, at sundarba002@mymail.sim.edu.sg, or the supervisor, Sarita Singh, at singh009@mymail.sim.edu.sg, with any questions before or after taking part.

Participant Consent Form

Solace: Healthcare Worker Burnout-Related Wellbeing Monitoring

Please tick each box to confirm that you agree:

- ☐ I have read and understood the Participant Information Sheet.
- ☐ I understand that taking part is voluntary and that I can stop at any time without giving a reason.
- ☐ I understand that this is an experimental student project and is not a medical or real wellbeing service.
- ☐ I understand that my raw recording is deleted after processing and is not uploaded or shared.
- ☐ I understand that my responses are anonymous and that I will not be identified in the project report.
- ☐ I understand that my anonymised data will be stored securely and deleted after the project is marked.
- ☐ I agree to take part in this study.
